

Target:

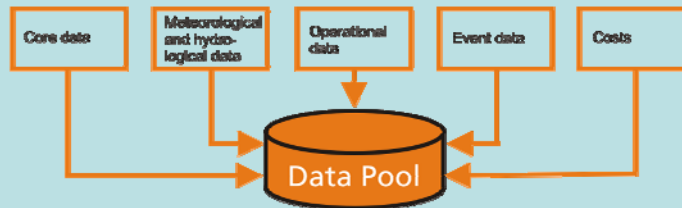

- Monitoring of offshore wind energy deployment
- Benchmarking & optimization of technical and operational concepts

Target Groups:

- Public
- Science
- Policy
- Wind farm operators
- Service suppliers
- Manufacturers

Methodology:

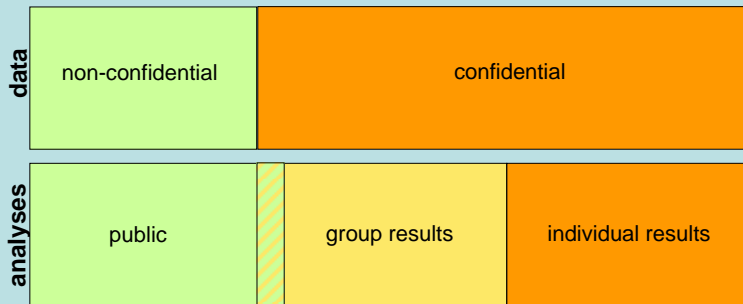

- Systematic preparation of operating and maintenance data

- Acquisition of detailed data of all offshore wind farms

Confidentiality:

- Only anonymous and non-confidential results are made available to the public

- Results for groups are always anonymized by aggregating

Results:

- Answering essential questions concerning development of wind energy, contributing to political decision-making processes and facilitating further technological progress

- Anonymous benchmarking and weakness analyses reveal potentials to optimize operation and performance of wind turbines and wind farms
